

Minimal `lisa` Example

Richard Schmoetten

June 14, 2022

1 Copy/Paste Isabelle listings: $A \implies B$

You can write inline listings using the `\lisa` command: $A \implies B$. This should¹ also work in footnotes. It also works without the `bigfoot` package, provided you escape special characters. You do currently have to escape e.g. backslashes in `lisa` inline listings in titles.

Listing environments are used as in the `listings` package, with defaults set in `lisa.sty`. Notably, these are `\footnotesize`.

```
A  $\implies$  B  $\longrightarrow$  C
```

¹Automatically adjust the font size: $A \implies B$. Thanks for making literals work, `bigfoot`!
