# Minimal `lisa` Example

Richard Schmoetten

June 14, 2022

## 1 Copy/Paste `Isabelle` listings: A $\implies$ B

You can write inline listings using the `\lisa` command: A $\implies$ B. This should[1] also work in footnotes. It also works without the `bigfoot` package, provided you escape special characters. You do currently have to escape e.g. backslashes in `lisa` inline listings in titles.

Listing environments are used as in the `listings` package, with defaults set in `lisa.sty`. Notably, these are `\footnotesize`.

```
lemma example: "A ⟹ B ⟶ C"
  using ... by simp
```

---

[1] Automatically adjust the font size: A $\implies$ B. Thanks for making literals work, `bigfoot`!
